

Unpacked South Dakota State Mathematics Standards

Purpose: *In order for students to have the best chance of success, standards, assessment, curriculum resources, and instruction must be aligned in focus, coherence, and rigor. Unpacked standards documents are intended to help align instruction to the focus, coherence, and rigor of the South Dakota State Mathematics Standards. The standards have been organized in clusters as they are not so much built from topics, but rather woven out of progressions. Not all content in a given grade is emphasized equally in the mathematics standards. Some clusters require greater emphasis than others based on the depth of the ideas, the time that they take to master, and/or their importance to future mathematics or the demands of college and career readiness. To say that some things have greater emphasis is not to say that anything in the standards can safely be neglected in instruction. Neglecting standards will leave gaps in student skill and understanding and may leave students unprepared for the challenges of a later grade.*

Domain: Numbers and Quantity		Grade Level: Algebra 2
A2.N.CN.B Cluster: Use complex numbers in polynomials identities and equations.		
<i>Learners should be able to use multiple methods to solve quadratic equations with complex solutions.</i>		
<p>**This is an ADDITIONAL cluster. <i>Students should spend the large majority of their time (65-85%) on the major work of the grade. Supporting work and, where appropriate, additional work should be connected to and engage students in the major work of the grade.</i></p>		
A2.N.CN.B.7 Solve quadratic equations with real coefficients that have complex solutions		
Aspects of Rigor for Students: (Conceptual, Procedural, and/or Application)		
A2.N.CN.B.7 Solve quadratic equations with real coefficients that have complex solutions		
Conceptual Understanding	Procedural Fluency	Application
	Learners solve quadratic equations with using a variety of methods, sometimes resulting in complex solutions.	
Enacting the Mathematical Practices - Evidence of Students Engaging in the Practices		
<ol style="list-style-type: none"> 1. Make sense of problems and persevere in solving them. 2. Reason abstractly and quantitatively. <ul style="list-style-type: none"> • Students will be able to explain the solutions of quadratics and their representations relative to roots of the quadratic. 3. Construct viable arguments and critique the reasoning of others. <ul style="list-style-type: none"> • Students will be able to justify solutions and appropriate techniques for solving different quadratic equations. 4. Model with mathematics. 5. Use appropriate tools strategically. <ul style="list-style-type: none"> • Students are able to choose the most appropriate method for solving a quadratic equation based on the structure of the equation. 6. Attend to precision. 7. Look for and make use of structure. <ul style="list-style-type: none"> • Students will be able to identify the real and non real portions of a complex solution. 8. Look for and express regularity in repeated reasoning. 		
Vertical and Horizontal Coherence and Learning Progressions		
<i>Previous Learning Connections</i>	<i>Current Learning Connections</i>	<i>Future Learning Connections</i>

<p><i>In Algebra 1, students solve quadratic equations using a variety of methods. Their solutions are limited to real solutions.</i></p>	<p><i>Students learn to solve polynomial equations that have complex answers.</i></p>	<p><i>Students will relate this knowledge of complex numbers to solving rational equations, trigonometric equations and trigonometric form in subsequent math courses (Pre-Calculus, AP Calculus, College Algebra, etc).</i></p>
<p>Vocabulary (key terms and definitions)</p>		
<p>Relevance, Explanations, and Examples:</p>		
<p>Achievement Level Descriptors</p>		
<p>Cluster: Use complex numbers in polynomials identities and equations.</p>		
<p>Concepts and Procedures</p>	<p>Level 1: Students should be able to base arguments on concrete referents such as objects, drawings, diagrams, and actions and identify obvious flawed arguments in familiar contexts.</p>	
	<p>Level 2: Students should be able to find and identify the flaw in an argument by using examples or particular cases. Students should be able to break a familiar argument given in a highly scaffolded situation into cases to determine when the argument does or does not hold.</p>	
	<p>Level 3: Students should be able to use stated assumptions, definitions, and previously established results and examples to test and support their reasoning or to identify, explain, and repair the flaw in an argument. Students should be able to break an argument into cases to determine when the argument does or does not hold.</p>	
	<p>Level 4: Students should be able to use stated assumptions, definitions, and previously established results to support their reasoning or repair and explain the flaw in an argument. They should be able to construct a chain of logic to justify or refute a proposition or conjecture and to determine the conditions under which an argument does or does not apply.</p>
