## Unpacked South Dakota State Mathematics Standards

Purpose: In order for students to have the best chance of success, standards, assessment, curriculum resources, and instruction must be aligned in focus, coherence, and rigor. Unpacked standards documents are intended to help align instruction to the focus, coherence, and rigor of the South Dakota State Mathematics Standards. The standards have been organized in clusters as they are not so much built from topics, but rather woven out of progressions. Not all content in a given grade is emphasized equally in the mathematics standards. Some clusters require greater emphasis than others based on the depth of the ideas, the time that they take to master, and/or their importance to future mathematics or the demands of college and career readiness. To say that some things have greater emphasis is not to say that anything in the standards can safely be neglected in instruction. Neglecting standards will leave gaps in student skill and understanding and may leave students unprepared for the challenges of a later grade.

| Domain: Operations and Algebraic Thinking | Grade Level: $\mathbf{4}$ |
| :--- | :--- |
| 4.OA.B Cluster: Generate and analyze patterns |  |
| This cluster's focus is to find, extend, and generate patterns to describe numerical and shape patterns. This helps |  |
| develop a conceptual understanding for all whole-number operations. Students should have an opportunity to extend |  |
| and describe both physical patterns and numerical patterns. |  |
| **This is an ADDITIONAL cluster. Students should spend the large majority of their time (65-85\%) on the major |  |
| work of the grade. Supporting work and, where appropriate, additional work should be connected to and engage |  |
| students in the major work of the grade. |  |
| 4.OA. 5 - Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that |  |
| were not explicit in the rule itself. For example, given the rule "Add 3" and the starting number is 1, generate terms in |  |
| the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain |  |
| informally why the numbers will continue to alternate in this way. |  |

Aspects of Rigor: (Conceptual, Procedural, and/or Application)

| Conceptual Understanding | Procedural Fluency | Application |
| :--- | :--- | :--- |
| Understand and explain a given rule <br> that includes shapes or numbers to <br> continue a pattern. (4.OA.5) | Complete a pattern with or without the <br> given rule. (4.0A.5) |  |
| Enacting the Mathematical Practices - Evidence of Students Engaging in the Practices |  |  |

1. Make sense of problems and persevere in solving them.

- Use problems as a context for finding and extending problems

2. Reason abstractly and quantitatively.

- Reason about similarities and generate rules to describe numerical and geometric patterns

3. Construct viable arguments and critique the reasoning of others.

- Use models and tools to describe patterns they find in problems, in numbers, and in geometric figures and to extend patterns to other situations.

4. Model with mathematics.

- Use drawings, lists, and tables to represent patterns.

5. Use appropriate tools strategically.

- Use hundreds charts and counters

6. Attend to precision.

- Describe patterns in a list using appropriate vocabulary.

7. Look for and make use of structure.

- Develop a deeper understanding of the structure of all four operations

8. Look for and express regularity in repeated reasoning.

- Begin to make generalizations by constructing rules for their patterns

| There are 4 beans in the jar. Each day 3 beans are added. How many beans are in the jar for each of the first 5 <br> days? <br> $\qquad$Day Operation Beans <br> 0 $3 \times 0+4$ 4 <br> 1 $3 \times 1+4$ 7 <br> 2 $3 \times 2+4$ 10 <br>  3 $3 \times 3+4$ <br> 4 $3 \times 4+4$ 13 <br> 5 $3 \times 5+4$ 16 <br> Achievement Level Descriptors <br> Cluster: Generate and analyze patterns <br> Concepts and ProceduresLevel 1: Students should be able to extend a number or shape pattern <br> that follows a given rule. |
| :--- | | Level 2: Students should be able to generate a number or shape pattern that |
| :--- |
| follows a given rule. |
