## Testimonials:

*"This training gave me a bigger picture of SLOs and what is expected. I used to think it only covered a few students, but learned it should cover the entire class and their growth."*

*"This training clarified the whole purpose of SLOs. I understand them better now and how they fit in with everything."*

High school science teacher: *"When I first heard we were going to do this SLO stuff, I had a bad attitude, because I did an SLO, and I guess I didn't really understand it and how it benefits kids, until today. So I'm glad I had the opportunity. The presenters were really good, and I'm glad I did it."*

High school FACS teacher: *"What I enjoyed the most was collecting data for the students and working in the Excel worksheet. And I enjoyed how they showed us how to group students by color coding them. Then you could have each group—their own separate goals—and it was very easy to keep track of."*
