

Dear South Dakota Board of Education,

We are pleased to present you with this petition affirming this statement:

**"Give all South Dakota students a 21st-century science education that includes climate science. Adopt the South Dakota Science Standards!"**

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,  
John Friedrich

Climate science is not fringe science. Students in South Dakota should not be placed at a disadvantage compared to youth in other states because of a vocal minority skewing the facts and pushing their own fringe agenda.

This is definitely a major and extremely important issue that needs more attention. Kids and adults alike need to be more aware of the way our life styles are impacting our world. We need to shape up if we want there to be a world left for future generations.

As a follower of Christ, I know we are often challenged by God to admit our failures (such as comfort and overconsumption), and profess our love of God through loving action, loving our neighbors in future generations around the world by giving them a world climate in which they can thrive, to the glory of God. I believe climate change deniers are simply being led by false prophets, serving their own material desires.

Dave Stucke

I am a student who grew up in the state of South Dakota and currently am studying to become a PHD in Physics at South Dakota School of Mines and Technology. Without a strong background in the sciences I could never have gotten to where I am today and I hope that the SD Department of Education implements these new standards. Please give our children the education they need to succeed in the future.

Religion is based on faith and not fact. Science however, is based on factual evidence. Galileo was persecuted by the Catholic Church because he dared to prove that the earth rotates around the sun which was in direct conflict with what the Christian faith believed to be true. Of course we now know that he was right! We can choose to be ignorant, but we should not keep others from seeking the truth and becoming educated.

I teach climate change at the college level but students need to get this long before college to prepare them to live in the 21st century.

Karel Bielstein  
Rapid City, SD 57702  
Apr 7, 2015

---

The anti-climate change nuts should not be allowed to influence the teaching of facts. They are no better than the creationists or the flat-earth people and their ideas have been proven wrong by knowledgeable scientifically-minded people.

I am a 4th generation South Dakotan, my great grandfather homesteaded here before we became a state. I'm sick of our state being last in about everything, please teach our young people the knowledge and skills that they and we need to compete in the 21st Century. If we continue this back water type of reasoning I will encourage my kids and grandkids to leave for a more enlightened state - it's getting embarrassing to hear such nonsense in our state.

In a state that has had extreme drought conditions, no one should be calling climate change a "fringe idea."  
Our children will have to deal with these issues as adults. They need the facts now.
