

Name	Which group do you represent?	Please use the space below to provide comment on the proposed South Dakota K-8 Computer Science Standards. Please include the specific standard that you are referencing.
Benjamin Benson	K-12 Educator, Higher Education Professional, Computer Science Professional	I believe that these K-8 standards are a great place to start to get kids engaged in computer science and computational thinking. I am excited to see where students who have a solid background in computer science are able to take our state.
Jennifer	K-12 Educator, Parent/Guardian	Computer Science is very important for all students. I believe there needs to be different levels to ensure all students are receiving useful teachings in this subject. Many special education students, no matter their level, can fall quickly behind if they are not receiving the support they need to accomplish the tasks set for them. This can be done by having more para's in the classrooms, smaller class sizes to allow the teacher to work more one on one with any student who needs it, or variations of the tasks set for them.
