South Dakota defined "comparable to same-age peers" as any child who received a standard score of -1.27 or above the norm on the Battelle Developmental Inventory II (BDI-2) scoring chart. This corresponds to the 10th percentile rank on the BDI-2 for a given outcome area. List the instruments and procedures used to gather data for this indicator. The BDI-2 is used to gather data for this indicator. When a child exits the Part C program and transitions to Part B (619), the student is assessed in the areas of cognitive, physical, communication, social-emotional, and adaptive development using the BDI-2. The exit data for Part C becomes the baseline data for children who become eligible for Part B (619). Children who enter the Part B (619) system at or after age three, will be tested using the BDI-2 in the areas of the development listed previously to establish a baseline. Upon exiting the 619 program, a student is assessed in the same five areas of development using the BDI-2. The baseline entry scores will be compared to the exit scores in the five evaluated areas of development to determine progress in the three indicator outcome areas.
